PROFESSIONAL SUMMARY

Final-year BSc (Hons) Information Technology undergraduate at SLIIT with over nine months of industry experience as a Software Engineering Intern at Information Systems Associates (ISA), a provider of software for the global travel and aviation industry. Worked across Java / Spring Boot backend services and React / TypeScript frontends: delivering new features, fixing production bugs and security vulnerabilities, refactoring services and improving test coverage in an Agile team. Seeking a Software Engineer role to build reliable, secure and maintainable software.

PROFESSIONAL EXPERIENCE

Software Engineering Intern — **Jul 2025 – May 2026**

Information Systems Associates (Pvt) Ltd – Colombo, Sri Lanka · Inventory Team

- Developed and shipped new features across the full stack, building backend services with Java, Spring Boot, gRPC and Hibernate/HQL, and frontend modules with React, Redux, TypeScript and Ant Design.
- Investigated and resolved production bugs in both backend and frontend code, keeping the inventory product stable for live users.
- Fixed security vulnerabilities in the application to improve its security posture.
- Refactored backend services to improve maintainability and code quality, working with Kafka messaging and PostgreSQL / Couchbase data stores.
- Wrote and improved unit tests to increase frontend test coverage; used JUnit for backend testing and SonarQube for code-quality checks.
- Worked with the team's CI/CD and tooling (Docker, Jenkins, Gradle, Git, Bitbucket) and took part in all Agile ceremonies: daily stand-ups, sprint planning, grooming, sprint reviews and retrospectives (JIRA, Confluence).

TECHNICAL SKILLS

Languages	Java, TypeScript, JavaScript, Dart, Python, SQL, Kotlin, C/C++
Backend	Spring Boot, Spring Cloud Gateway, gRPC, Hibernate/HQL, Apache Kafka, REST APIs, Node.js, Express.js, FastAPI
Frontend & Mobile	React, Redux, Ant Design, Tailwind CSS, Material UI, Flutter, Android (Kotlin)
Databases	PostgreSQL, MySQL, MongoDB, Couchbase, Firebase Firestore
DevOps & Cloud	Docker, Jenkins, Gradle, SonarQube, Cloudflare Workers, Firebase
Testing & Tools	JUnit, unit testing, Postman, Git, GitHub, Bitbucket, JIRA, Confluence, Figma

EDUCATION

BSc (Hons) in Information Technology – Specialising in Information Technology — **2022 – 2026**

Sri Lanka Institute of Information Technology (SLIIT), Malabe

Weighted GPA: 2.82 (final-year results pending) · Expected graduation: March 2027

Relevant modules: Cloud Computing, Data Science & Analytics, Modern Topics in IT, Database Systems, Information Assurance & Security, Programming Applications & Frameworks, Human Computer Interaction, IT Project Management

GCE Advanced Level – Biological Science Stream — **2020**

FINAL-YEAR RESEARCH PROJECT

GreenSweep – Smart Waste Management System (R26-IT-126) 2025 – 2026

IoT and ML-based waste monitoring platform · My component: Smart Waste Collection App (real-time bin detection, adaptive route optimisation, resident-driven coordination)

- Built the Flutter Android app for three roles: residents request pickups by placing a flag on the map, track the collection truck live and report bin issues; drivers get optimised routes; admins manage accounts.
- Implemented adaptive route optimisation: a nearest-neighbour ordering of critical smart bins and pickup requests, turned into turn-by-turn road routes with OSRM on OpenStreetMap, plus live driver location sharing via an Android foreground service.
- Designed a serverless backend on Cloudflare Workers (TypeScript) that replaced paid Cloud Functions: server-side email OTP verification, role-checked admin APIs, push notifications, scheduled announcement and clean-up jobs, and an IoT endpoint that receives fill-level and gas alerts from ESP32 smart bins.
- Secured the system with Firebase ID-token verification, role-based Firestore security rules and device-secret authentication for IoT devices.

Tech: Flutter, Dart, Firebase Auth, Cloud Firestore, FCM, Crashlytics, Cloudflare Workers, TypeScript, OSRM, OpenStreetMap, EmailJS · github.com/AshenMayuranga/R26-IT-126

PROJECTS

Pharmacy Management System – Spring Boot Microservices

Full-stack system with separate auth, medicine, inventory, prescription, patient, sales and supplier services behind a Spring Cloud Gateway, Eureka service discovery and Kafka-driven notification and report services.

Tech: Java, Spring Boot, Spring Cloud Gateway, Eureka, Kafka, React, TypeScript, PostgreSQL · GitHub

LankaCart – Microservices E-Commerce Platform

E-commerce MVP with four independent Spring Boot services (user, product, order, inventory), a central API gateway with aggregated Swagger docs and a React TypeScript frontend.

Tech: Java, Spring Boot, Spring Cloud Gateway, PostgreSQL, React, TypeScript, Swagger · GitHub

PocketPulse – Personal Finance Management App (Group Project)

Built the income and expense management module (full CRUD with interactive charts) and designed a "What-If Scenario Planner" that projects future finances.

Tech: MongoDB, Express.js, React, Node.js, Tailwind CSS, Material UI · GitHub

EduJourney – E-Learning and Social Platform (Group Project)

Implemented post management and a backend-generated notification system with full CRUD, secured with JWT and OAuth 2.0.

Tech: Java, Spring Boot, MongoDB, React, Material UI, JWT, OAuth 2.0 · GitHub
